The following Listing of Claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1. (Original) A thermosetting and active energy ray curable resin composition comprising, as active constituents,

a polymer having a (meth)acryl equivalent of 100 to 300 g/eq, a hydroxyl value of 50 to 550 mgKOH/g, an epoxy equivalent of 7000 g/eq or more, and a weight-average molecular weight of 5000 to 100000, and

a heat-curing agent.

- 2. (Original) The resin composition according to claim 1, wherein the polymer is a reaction product of the addition of a monocarboxylic acid having an unsaturated double bond to a polymer having an epoxy group.
- 3. (Original) The resin composition according to claim 2, wherein the polymer having an epoxy group is a homopolymer of glycydyl(meth)arcylate or a co-polymer of glycydyl(meth)arcylate.
- 4. (Currently Amended) The resin composition according to <u>claim lany one of claims 1</u> to 3, wherein the heat-curing agent is one or more compounds selected from the group consisting of chelate compounds, metal alkoxides, silane coupling agents and partial hydrolysate thereof, and acid anhydrides.
- 5. (Currently Amended) The resin composition according to <u>claim 1 any one of claims 1 4</u>, further comprising a photopolymerization initiator.
- 6. (Currently Amended) A transfer material comprising a protective layer formed of a

heat-crosslinking reaction product of the resin composition according to <u>claim 1</u> any one of claims 1 to 5 on a releasable base sheet.

- 7. (Original) The transfer material according to claim 6 further comprising an image layer and an adhesive layer in this order on the protective layer.
- 8. (Currently Amended) A method of producing a molded article, comprising the steps of: adhering a transfer material according to claim 6 or 7 to a surface of a molded article;

removing the releasable base sheet; and

irradiating the surface of the molded article with an active energy ray, thereby forming a protective layer on the surface of the molded article.

9. (Currently Amended) A method of producing a molded article, comprising the steps of: applying a transfer material according to claim 6 er-7 to the inside of a mold; filling a cavity of the mold with a resin by injection to thereby form a molded article and adhering the transfer material to a surface of the molded article simultaneously;

removing the releasable base sheet; and

irradiating the surface of the molded article with an active energy ray to thereby forming a protective layer on the surface of the molded article.
